

ENVIRONMENTALLY SAFE

BLACK PEARL™

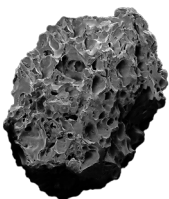

PREMIUM ABRASIVE MEDIA FROM ICELAND

BLACK PEARL by Arctic Aggregates is the environmentally responsible alternative to coal and copper slag abrasives. Sourced from a rare, naturally occurring volcanic basalt stone found only in Iceland, BLACK PEARL offers a sustainable abrasive solution for sandblasting without the risk of introducing heavy metals and toxins into groundwater—unlike old fashioned coal and copper slag abrasives.

Ideal for outdoor applications where environmental preservation is a priority, BLACK PEARL ensures both superior performance and eco-conscious integrity. Differentiate your business by choosing this Earth-safe, high-quality abrasive that aligns with sustainability standards while delivering exceptional results.

BLACK PEARL possesses a jagged surface texture unlike any other abrasive media—delivering a superior cleaning and texturizing effect when compared to coal and copper slag.

BLACK PEARL™ Basalt Stone
During volcanic formation millions of years ago, tiny gas bubbles result in jagged surface texture—ideal for abrasive work. Non-toxic to the environment.

Coal and Copper Slag
Dull surface texture and brittle, due to formation from compacting pressure inside the earth. Can introduce toxic heavy metals into the environment.
