

BLACK PEARL™ POLYMERIC SAND / RAW MATERIAL FROM ICELAND

Arctic Aggregates is a B2B supplier of premium raw materials for polymeric sand manufacturers and large-scale installers across North America and Europe. We provide naturally-occurring Icelandic black basalt sand and pebbles as the base aggregate for polymeric jointing sand formulations – delivering a naturally dark black, durable, fade-resistant, and stable material that enhances the performance of polymeric sand applications.

BLACK PEARL™ Polymeric Basalt Sand Delivers Superior Grip

During volcanic formation billions of years ago, tiny gas bubbles result in jagged surface texture that provides stronger grip to other sand grains between and under pavers. This interlocking of sand grains means less sloughing-off of sand, less erosion, and less shifting of pavers over time, even within 2” joints.
